Where Everything Stands

Thursday 5 November 2026, 08:30. Every open thing, sorted by stage. **Red = waiting on you.** Everything else is on my side.

1. Going live today (nothing for you to do)

What	When
Polyhedraverse: RD/TRD half-cell with ⟳ Turn (k-mix dd0b489f)	Deploy queue 12:00 today; I check CI once after

2. Ready to publish: already read ok, waiting only for the weekly batch (~9 Nov)

What	Goes out as
Quanta of Space Vol I v2 (110 pp, Rovelli credit added)	New Zenodo version
The DICTOnary of Atoms (Quanta of Space II, 59 pp)	New Zenodo record
Quanta of Space, Japanese (Vol I)	Own record, linked to the original
The Golden Ladder ch 1 “One Triangle, Three Numbers” + ch 2 “Silence Is Golden”	Golden Ladder v1
“The Turned Twin” (TRD note)	Chapter of the HexOct volume
Collected Works + dataset	Weekly version with the batch

3. Waiting for your read (top of the reading folder)

File	What I need from you
DRAFT-Pentagons-for-the-Kites.pdf (6 pp, new paper)	**Read; choose title and number; name the new pieces (adaptor, connectors, corner pieces). I add the gyrated kit to §4 first.**
DRAFT-v5-Ogdoecontahedron.pdf (8 pp)	**Read. Releases with or after Pentagons for the Kites.**
DRAFT-Narcissus-and-Covenant.pdf (5 pp, HexOct chapter)	**Read. I run the prior-art search on the hybrids before any claim.**
DRAFT-DICTOnary-of-Atoms-ja.pdf (Japanese Vol II)	**Read ok or corrections.**
Picture-book-2026-11-05.pdf	For looking only.

4. Print: Amazon KDP books (held on purpose)

Books	Stage
HexOct · Alicia · Bonds · Golden Cycle · Quanta of Space (five folders *amazon-kdp**)	Interim covers + interiors made. Your rule (30 Oct): upload all together once every update is settled. Quanta v2 and the DICTOnary must go out first.

5. Research in progress (on dicto-big-brother)

Thread	Stage	Next
AIM: one piece, any stacking	Step 2 done: 2 routes closed, 2 open (Socolar–Taylor in-layer key; in-layer + vertical coupling)	Step 3: Socolar–Taylor digest (running) → map onto a Narcissus layer → SAT test
Pentagons kit (feeds the new paper)	Octet, single twin, fully gyrated all close; 7 shapes (10 with mirrors), left/right settled	One mixed stacking; exact Dehn; exact volumes; equal-edge closed form; near-miss + prior-art check
Narcissus / RD hybrids (HexOct chapter)	Hybrids + H/N mixing pass the full float check; splice: only the parents tile (t = 0.25, 0.5 fail; 0.75 no answer)	Exact certificates; prior art
Centre Pyramids	TRD trapezoid pyramid tiles alone (verified)	Into the Centre Pyramids paper when it is finished
RT pyramids (RT-150)	Running	Read result

6. Your own small tasks

ORCID: add #75, #81, #84, #85, #88, #92, #93 (I have the DOIs). Google Search Console / Bing. GitHub/Vercel avatars.

7. Parked (kept, not active)

About 60 older ideas and paused studies stay in the open-work list (wizard rebuild items, Bodhi shell build, Heikegani renders, Polyhedraverse Targets, golden fill of the bcc gap, B1NR family, Mandala of Shells #46, Platonic-mix #48 scope…). None is moving now; each restarts only when you pick it.

The one thing to do first: read Pentagons for the Kites. It unlocks the OG v5 release and the pointer updates to three earlier papers.
